

Configuring a Zebra Printer with CUPS

Here's how to set the remaining available Printer Settings after some "General" settings were completed during the initial install.

Starting from the Home menu, click Printers

The screenshot shows the CUPS 1.4.2 homepage. At the top is a horizontal navigation bar with links for Home, Administration, Classes, Online Help, Jobs, and Printers. A red arrow points to the 'Printers' link. To the right of the navigation bar is a large logo for 'UNIX PRINTING SYSTEM' featuring a stylized 'C'.

CUPS 1.4.2

CUPS is the standards-based, open source printing system developed by Apple Inc. for Mac OS® X and other UNIX®-like operating systems.

Click on a Queue name that was created using the Install or Add Printer process

The screenshot shows the 'Printers' page. At the top is a navigation bar with links for Home, Administration, Classes, Online Help, Jobs, and Printers. Below the navigation bar is a search bar labeled 'Search in Printers:' with a 'Search' button and a 'Clear' button. The main content area displays a table of printer queues:

Queue Name	Description	Location	Make and Model
GK420D	Ethernet-10.3.50.100	LAB	Zebra ZPL Label Printer
print	print		Zebra CPCL Label Printer
PrintToFileZPL	PrintToFileZPL		Zebra ZPL Label Printer

Showing 3 of 3 printers.

From the Administration drop down select Set Default Options

GK420D (Idle, Accepting Jobs, Not Shared)

Maintenance Administration
Description: Eth... **Location:** LAB
Driver: Zeb... **Connection:** soc...
Defaults: job-sheets:none, none media=adobe_w288h360_4x5in

Select Printer Settings to access these additional options:

When accessed for the first time, all are set to “Printer Default” which means no printer language commands will be sent from the driver to affect the printers existing settings.

Printer Settings

Darkness:

Print Rate:

Label Top:

Print Mode:

Tear-Off Adjust Position:

Reprint After Error:

If the settings are changed, each will send a command to reflect the setting from the available range. The driver always has precedent. Meaning that any command it receives will change its current setting once they are changed from “Printer Default.”

Printer Settings

Print Rate:

Label Top:

Print Mode:

Tear-Off Adjust Position:

Reprint After Error:

Since you select by printer language and not printer model, these settings range from the highest to lowest possible setting for all printers supported by the printer language. Some settings may not apply to your printer model. The printer will be set for its own maximum setting and ignore settings above.

Note: Printers without cutters would ignore a Print Mode setting for cutter.

The following ZPL file was created based on the printer settings above. This is a print to file of the Print Test Page option with the graphics data removed to show ZPL code only.

~SD30

~DGR:CUPS.GRF,103530,102, (Downloads the CUPS.GRF to the printer)

.....^XA

^PR12,12,12 (Sets Print Speed, Slew Speed, and Backfeed Speed; CUPS does not have the ability to set these values individually)

^LH0,0 (Sets the Label Home position to 0,0; CUPS does not provide an option to change this setting)

^MNY (Sets for non-continuous media)

^LT120 (Moves the entire label format a maximum of 120 dot rows up or down in relation to the top edge of the label. A positive value moves away and a negative value towards the top edge)

^MTD (Sets Media Type to Direct Thermal (no ribbon) or Thermal Transfer (use ribbon) if printer can accommodate a ribbon)

^MMC,Y (Print Mode – in this example the printer would be set for cutter. The ,Y is for prepeel select and only applies when the printer is set to MMP for Peel-off)

~TA120 (Tear-Off Adjust lets you adjust the rest position of the media after a label is printed, which changes the position at which the label is torn or cut.)

^JZN (The ^JZ reprints a partially printed label caused by Ribbon Out, Media Out, or Head Open error condition. The label is reprinted as soon as the error condition is cleared)

^FO0,0^XGR:CUPS.GRF,1,1^FS

^IDR:CUPS.GRF^FS

^XZ

Other printer languages have the following Printer Settings available:

CPCL

Darkness (1 – 30)

Print Rate (1 – 4)

Tear-Off Adjust Position (-120 thru +120)

Reprint After Error (Always or Never)

EPL1

Darkness (1 – 30)

Print Rate (1, 1.5, 2, 2.5)

EPL2

Darkness (1 – 30)

Print Rate (1 - 6)
