

How to use EIN with IDLog

Go to Printers & Faxes, right click on the P6xxi printer and select Printing Preferences.

Next, Select the Magnetic Encoding tab. Check the box next to Enable EIN Readback. This will allow us to get EIN information from the magnetic stripe or barcode.

Now select the ID/Log tab. Check the box next to Enable Logging. The file path for the ID Log is pre-determined, but you can create a custom name for the log. In the bottom half of the tab, check the box EIN data from Mag Track 2. This will make sure you log the EIN information to the log file. You can select any other information from the list provided by simply checking the box next to the item you want to record.
