

Table 8 • Printer Parameters (Sheet 3 of 22)

Language/Parameter	Action/Explanation
 MEDIA TYPE -NON-CONTINUOUS +	<p>Set Media Type</p> <p>This parameter tells the printer the type of media that you are using (see <i>Types of Media</i> on page 31 for more information). Selecting continuous media requires that you include a label length instruction in your label format (^Lxxxxx if you are using ZPL or ZPL II).</p> <p>When non-continuous media is selected, the printer feeds media to calculate label length (the distance between two recognized registration points of the inter-label gap, webbing, or alignment notch or hole).</p> <p><i>Default Value:</i> NON-CONTINUOUS <i>Selections:</i> NON-CONTINUOUS, CONTINUOUS</p> <p>To change the value shown:</p> <ol style="list-style-type: none"> 1. Press PLUS (+) or MINUS (-) to scroll through the options.
 SENSOR TYPE -WEB +	<p>Set Sensor Type</p> <p>This parameter tells the printer whether you are using media with a web (gap/space between labels, notch, or hole) to indicate the separations between labels or if you are using media with a black mark printed on the back. If your media does not have black marks for registration on the back, leave your printer at the default (WEB).</p> <p><i>Default Value:</i> WEB <i>Selections:</i> WEB, MARK</p> <p>To change the value shown:</p> <ol style="list-style-type: none"> 1. Press PLUS (+) or MINUS (-) to toggle between the options.
 PRINT METHOD -THERMAL-TRANS. +	<p>Select Print Method</p> <p>The print method parameter tells the printer the method of printing that you want to use: direct thermal (no ribbon) or thermal transfer (using thermal transfer media and ribbon).</p> <p><i>Default Value:</i> THERMAL-TRANS. <i>Selections:</i> THERMAL-TRANS., DIRECT THERMAL</p> <p>To change the value shown:</p> <ol style="list-style-type: none"> 1. Press PLUS (+) or MINUS (-) to scroll through the options.

Table 4 • Roll and Fanfold Media

Media Type	How It Looks	Description
<p>Non-Continuous Roll Media</p>		<p>Roll media is wound on a 3-in. (76-mm) core. Individual labels are separated by one or more of the following methods:</p> <ul style="list-style-type: none"> <p>Web media separates labels by gaps, holes, or notches.</p>  <p>Black mark media uses pre-printed black marks on the back side of the media to indicate label separations.</p>  <p>Perforated media has perforations that allow the labels or tags to be separated from each other easily. The media may also have black marks or other separations between labels or tags.</p> 
<p>Non-Continuous Fanfold Media</p>		<p>Fanfold media is folded in a zigzag pattern. Fanfold media can have the same label separations as non-continuous roll media. The separations would fall on or near the folds.</p>
<p>Continuous Roll Media</p>		<p>Roll media is wound on a 3-in. (76-mm) core. Continuous roll media does not have gaps, holes, notches, or black marks to indicate label separations. This allows the image to be printed anywhere on the label. Sometimes a cutter is used to cut apart individual labels.</p>
